Airtel Secure Internet

Protect your organization's internet from security threats

Overview

The spectre of cyber **vulnerabilities in 2020**

The openness and easy availability of the intenet has played a revolutionary role in the development of modern business models with new avenues for transactions and communications. However, this same open and shareable infrastructure comes with inherent vulnerabilities that have led to serious data security concerns including:

- Data-stealing
- Fraud
- Security breaches

"Studies indicate that cyber-attacks have constantly been on the rise with a staggering 61% businesses reporting a security breach in 2019. And with the widespread adoption of digital channels in the new normal, the numbers are only set to rise."

Today, enterprises need to ensure that their internet access endpoints are secure in order to filter out any undesired elements including viruses, malware, and hackers. It becomes imperative that you adopt a comprehensive security strategy that focuses on securing the internet access infrastructure.

This however requires a major investment in various security solutions that can not only be cumbersome and cost-intensive to maintain but also require constant, round-the-clock access to tech experts for solution implementation and management support. In short, staying secure becomes highly cost-intensive and onerous for you.

The Solution

Security at the core of your network

Airtel Secure Internet is a fully managed, cost-effective solution that lets you manage and gain control over internet access. This is instrumental in preventing any unauthorized access to the corporate network.

This convergent solution provides:

Enterprise-grade internet integrated with **next-generation firewalls** that gives you malware and virus protection, intrusion detection, and content filtering.

Significant cost savings in both capital expenditures and management and monitoring costs with our flexible **subscription-based pricing model.**

Reduced complexity of the network without compromising on security.

Key defining features

Support services you can trust:
Includes onsite installation, onsite support, change management and proactive monitoring for device health check-up and comprehensive support from our security intelligence center.

Security solutions built for you:
A flexible deployment model allows you to deploy a stand-alone firewall hardware on existing internet link or an integrated solution that bundles enterprise grade internet with the firewall.

Encryption that stands strong:
IPSec and SSL VPN, network segmentation and load balancing are included as part of our encryption protocols.

Delve deeper into packet inspection:
Built on Reassembly-Free DPI (RFDPI) engine that makes it compatible with packet, crypto, and network processing.

All that you need at one place:
Experience all-in-one security capabilities with firewall, including anti-spam, anti-virus, intrusion prevention and content filtering for complete protection.

Keep a watchful Eye on your network's safety protocols:
Get 360-degree performance with metrics across change management, proactive system monitoring, application/content updates, responsiveness, availability, and protection.

Business Benefits

Get the Airtel Secure Internet
Advantage for your Business

The Airtel Advantage is our solemn promise to provide you with the expertise and technology that will keep you at the very top of a growing digital ecosystem. You can now secure and expand your network like never before to stay one step ahead.

Flawless connectivity with robust security

We provide ente prise-grade internet connectivity integrated with an advanced firewall that protects your systems from all types of malware and intrusion of unwanted entities.

Hassle-free protection

Our Security Intelligence Centre provides end-to-end managed services round-the-clock so that your teams can focus on business growth and sustainability.

Flexible and transparent pricing

We offer monthly and quarterly subscription-based pricing for firewall and managed services that relieve you of any upfront capital expenditure.

Incremental upgrades

We upgrade your hardware at a nominal incremental cost every time you upgrade internet bandwidth

Why Airtel Secure?

Airtel has decades of rich experience in the domain of networking and infrastructure. We have been one of the pioneers of building, evolving, and maintaining the public network– the wide scale infrastructure that runs to virtually every household and business in the land.

With our proven proficiency at securing a wide network that is both secure as well as resilient, we can be your trusted partner in your business growth.
